The JOpera Autonomic Workflow Engine

- Distributed workflow engine needs to be configured correctly to run on a cluster
- Autonomic controller provides self-tuning, self-configuration and self-healing capabilities
- Self-tuning and self-configuration components to achieve optimal configuration
- Self-healing component recovers the system from internal and external failures

Autonomic Controller

JOpera provides a flexible autonomic platform for distributed execution of Web service workflows

Demo

- Self-tuning and self-configuration components to achieve optimal configuration
- Self-healing component recovers the system from internal and external failures

Distributed Engine Architecture
